

GREYWATER SYSTEMS

BASIC

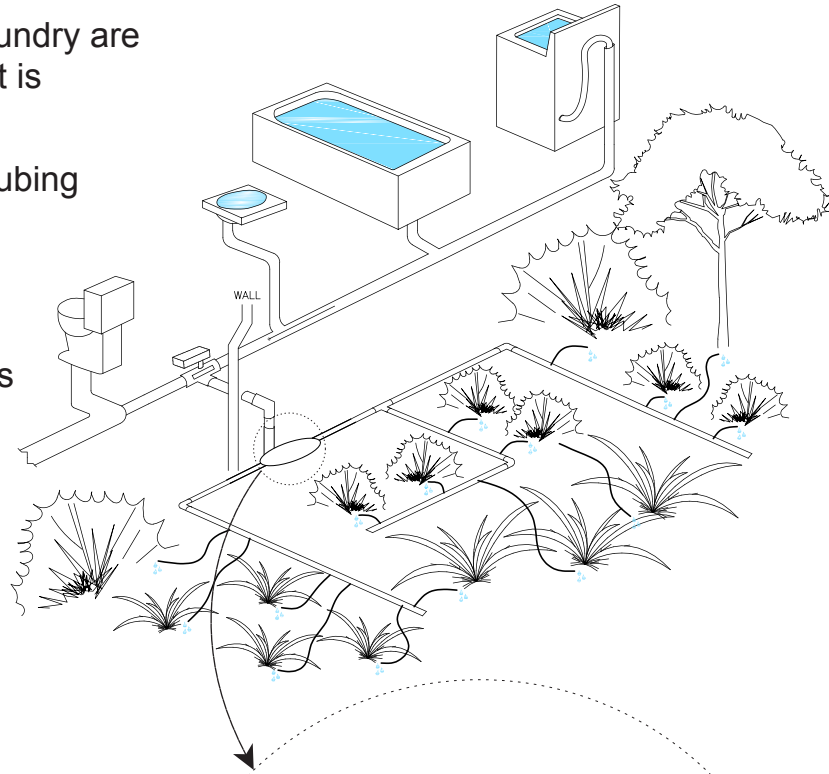

The Basic Greywater system is easy to install, affordable and offers great flexibility for irrigating smaller perennial plants, as well as larger trees and shrubs.

Applications:

Greywater from the showers, sinks and laundry are drained into the greywater system where it is filtered and pumped to the landscape

- Greywater is dispersed through 1/4" drip tubing to plants in the landscape, or through drip irrigation emitters with additional filtration
- Greywater is dispersed to the landscape when the filter box is full, or every 24 hours
- Greywater irrigation zones can be uphill or far distance from house greywater fixtures.

Features & Benefits:

- An ecological, medium-tech solution for graywater recycling. A variety of plants throughout the landscape can be irrigated with the Basic Greywater system
- Low maintenance filters only require cleaning once every 6-12 months
- Easily connected to the laundry machine without altering any of the house plumbing
- Can be installed in mature landscapes without disturbing existing plant material
