

GRAYWATER SYSTEMS low-tech

BRANCHED DRAIN

The branched drain graywater system is low cost, quick to install, and can use all the graywater produced from a home for landscape irrigation

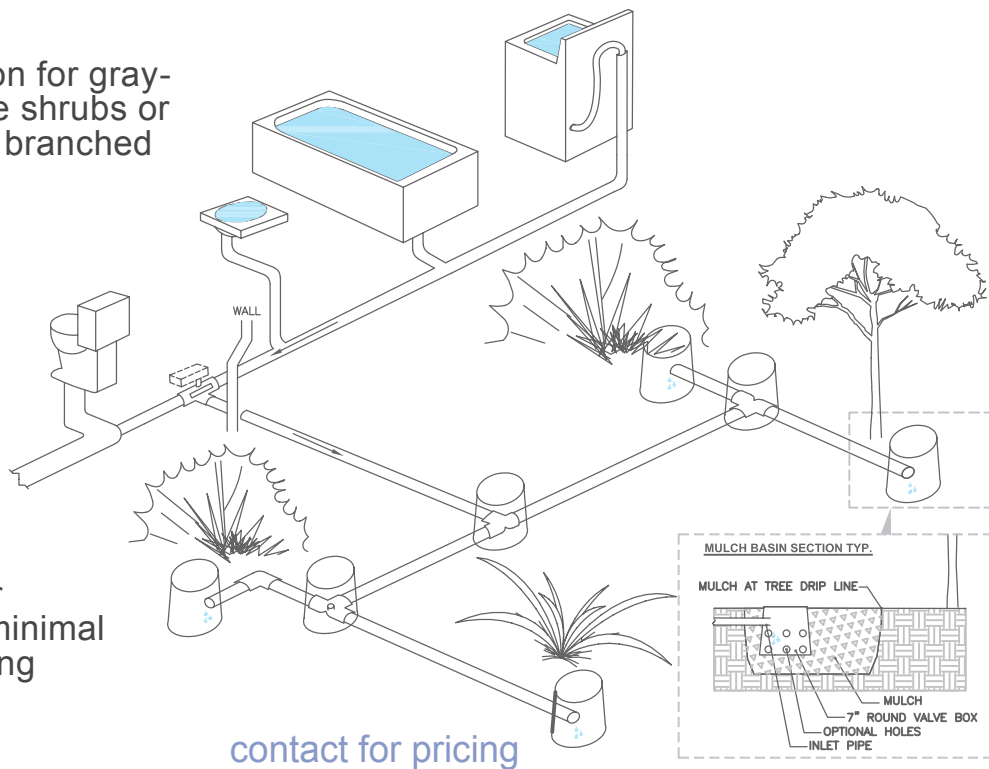

Applications:

- Graywater from the house drains through a series of branching pipes and is dispersed into the landscape into mulch basin outlets
- Showers, sinks and laundry can individually drain into the landscape, or be collected together into a single branched drain system
- Graywater irrigation zone must be downhill relative to the shower, sink and laundry inside the home

Features & Benefits:

- An ecological, low-tech solution for graywater recycling. Up to 8 large shrubs or trees can be watered with the branched drain graywater system
- With no filters to clean, the system requires little to no maintenance once installed.
- The branched drain graywater system can be installed with minimal alteration to the house plumbing
